

## CONCRETE REMOVER

This acid-based cleaner is used to remove mortar from equipment and trucks, clean concrete, and remove scale and rust. It contains a unique blend of acids, inhibitors and detergents.

The primary chemical mechanism that occurs is a weakening of the bonding forces that give concrete, scale, rust and mortar their hardness. This allows for easy removal of excess concrete, mortar, rust and scale from a variety of surfaces.

### DIRECTIONS

Dilute to desired strength. For removal of mortar from trucks and equipment, use at full strength. Rinse surface well with water after cleaning.
